--DETAILED DESCRIPTION OF THE INVENTION--.

After the claims, on a separate page, add the abstract of the disclosure submitted herewith on a separate page.

**IN THE CLAIMS:**

1. (Amended) A milling head having a body (10) and at least one cutting insert (150), a clamping element for adjustably clamping to the body (10), the cutting insert extending in a recess of the body, and adjusting means (152, 160; 164, 166, 168; 170; 180; 190, 194) for adjusting the cutting insert, wherein the cutting insert (150) further includes a pivot mounting for adjustment purposes, and wherein on both sides of the pivot mounting the two adjusting means (166, 168) are provided in the cutting insert for fixing the pivot movement of the cutting insert, characterised in that the cutting insert (150) is mounted on an adjusting part (152), the adjusting part includes a protruding curvature (164) for forming a pivot, and the two adjusting means (166, 168) are in engagement with the adjusting part.

3. (Amended) A milling head according to claim 1, characterised in that the cutting insert (150) further comprises a rotatable cutting plate which supports a cutter.

c  
c

4. (Amended) A milling head according to claim 1, characterised in that a shaped member (190) is provided as the adjusting means for the cutting insert and is in forced form engagement with a complementary recess (196) of the cutting insert (150) in such a manner that any movement of the adjusting part causes the cutting insert to move in the same direction.

c  
c

18. (Amended) A milling head having a body (210) and cutting inserts (250) which can be adjusted in recesses (220), a clamping element (270) disposed in a recess (230) for clamping purposes, wherein the cutting insert (250) is positioned in a receiving part (222, 224) and is fixed in its position by means of the clamping element (270), characterised in that the clamping element is wedge shaped having a receiving part and is received in its receiving part in a positive-fitting manner.
